The City of Fremont is conducting a design-level study that examines Bay Trail alignments and preliminary design concepts for the one-mile gap along Coyote Creek between the Fremont Boulevard terminus and Dixon Landing Road. The Study identifies issues and opportunities associated with potential trail alignments and examines four options for crossing the Flood Control channel.

The Study goal is to identify a workable alignment that will provide safe and efficient connections to Fremont Boulevard and Dixon Landing Road, and to existing and planned Bay Trail segments on the west side of the I-880 corridor. The Study evaluates a precise plan for implementing this connection with preliminary site analysis and conceptual design options to facilitate decision-making and environmental review. The Study evaluates existing conditions, site opportunities and constraints, and provides planning-level cost estimates. The Study also provides recommended options for phasing, funding, and implementation of the trail. The Study Team will present an update on their findings and recommendations to date, and receive input from the BPTAC and the public for use in completing the report.
